

WHAT DOES OUR MANAGED SERVICES DO FOR YOU?

Managed Services, or Tactical IT solutions that help streamline operations and improve efficiency—are the modern method for empowering businesses to stay current in advancements for security, infrastructure, logistics, and more.

— 1 —

How does Managed Services help you save money and simplify your budget?

IT costs are predictable and scalable
– simplifying your monthly budgets

Large IT infrastructure and device investments can be moved from CapEx to OpEx

In-house IT headcount can be reduced or refocused on process and system improvement rather than support tickets

— 2 —

How will Managed Services ensure my business stays up to date?

We keep your technology always up-to-date, secure, and optimized

You get dedicated experts that monitor, maintain, and secure your IT systems 24/7

Our teams have specialized expertise in the areas they practice and always stay up to date on the latest solutions

— 3 —

How can Managed Services make your business more efficient?

Your IT headcount can be refocused on business and process improvement

24/7 remote support infrastructure means your team has the help it needs any time, any place

Expertly managed infrastructure and devices means you minimize downtime and maximize your infrastructure's potential

Modern business exists in a fast-paced digital landscape with ever increasing demands in IT infrastructure, optimization, and security. Make a profound difference by streamlining operations, growth, and more with our customized solutions that will be specifically crafted for your success.

WHY SHOULD YOU CHOOSE OUR MANAGED SERVICES?

As a competitive provider of tactical solutions for modern businesses, we have been developing tailored insights to business like yours and converting them into strategic managed solutions that provide immediate, recognizable impacts on your efficiency, scalability, and profitability.

WHAT DO WE DO DIFFERENT?

Just because the shoe fits, that doesn't make it comfortable. Our solutions are tailored to seamlessly integrate into your digital infrastructure, so the way you do business is uninterrupted.

What you can't see can hurt your business. That's why we have the tools to see everything. We will detect and address threats before they ever get anywhere near your data.

Disaster happens, recovery doesn't always happen. We will build a robust disaster recovery plan for you that will drastically decrease downtime.

Balancing the scales keeps you on an even keel. Our tools for scaling your IT needs with your business are streamlined to allow minimal to substantial growth at any time, instantly.

Device+Software+Service=XaaS! This simple equation is how you can keep up with growing IT demands while maintaining a low overhead!

Bridge Your IT Gaps with a Managed Service Provider

Many businesses face the staggering task of simply getting their work done and keeping the company profitable with very little time to focus on supporting employees' tech needs, improving operations, refreshing technology, or even ensuring security is up to date. With ever-growing infrastructures and data volumes, rising cloud adoption, increasing security attacks, and ongoing remote workforces, you already know that now is not the time to reduce your IT support and/or staff.

"Most organizations are now trying to become more digital than they ever planned and sooner than they planned."

- John-David Lovelock,
Research Vice President,
Gartner

MSPs to the Rescue

A managed service provider (MSP) delivers services, including network, application, infrastructure and security, via ongoing and regular support and active administration on prem in your location, in our own data centers, or in a third-party data center. You can leverage MSP services in a wide range of environments to help fill in-house IT gaps or to offload remote management and monitoring of your IT infrastructure and systems, allowing your IT staff to take on larger in-house projects. Or you can use an MSP to fully take on all of your IT needs. By employing one of our subject matter experts, you'll reap the benefits for years to come in more than just cost savings.

3 Key Benefits of Using an MSP

Enhanced Security

1

Cybersecurity concerns are continuously mounting as attackers find new ways to wreak havoc and exploit your vulnerabilities to make financial gains. Industry experts conclude that the **average cost of a cyberattack has exploded from \$34K to just under \$200K per single incident**, a setback that many SMBs can't recover from. We stay up to date on the latest threats and best solutions to ensure the safety of your data, in addition to offering network monitoring, software, and backup/recovery plans.

Improved Business Agility and Upgrades

2

Accelerated digital transformation efforts happen. From remote workforce infrastructure and support to virtual service delivery and hyper-automation, your teams can be taxed to the max. MSPs have the experience, resources, and subject matter experts to proactively address and support your technology requests from soup to nuts, allowing you peace of mind as you focus on the bigger picture and profitability.

Predictable Cost Structure

3

Leveraging an MSP's services **can be significantly less expensive than staffing and maintaining a full in-house IT department**. You're able to reduce the costs associated with salaries, benefits, employee training/education, and keeping IT resources documented and up to date. We can further help reduce expenses related to typical IT budget line items, including network infrastructure, hardware, and maintenance costs while providing a package of services based on your needs, creating a more predictable annual IT spend.

Whether you need to improve your operations by augmenting your IT department or if you need to outsource entirely, we can help! We offer a range of technology services including network, application, infrastructure, disaster recovery, security, and so much more - all designed to help your company reach its potential.
