Outsourcing Isn't a Bad Word.
Your IT Team's New Best Friend:
Managed Services.

Managed IT Support

OUTSOURCING ISN'T A BAD WORD. YOUR IT TEAM'S NEW BEST FRIEND: MANAGED SERVICES.

Small- to medium-sized businesses generally don't have the resources to fully support all their IT infrastructure needs. Even if your business has one or several in-house IT technicians on payroll, they are often so bogged down by routine daily tasks that their talent is wasted. These employees aren't adding nearly as much value to your business as they should be. According to the research group Gartner, over 65% of IT budgets go towards tasks that do nothing more than keep the lights on. You are investing money that isn't improving operations and efficiency, or enhancing security.

Today, Managed Service Providers (MSPs) are being used by businesses everywhere to cost-effectively manage, service, and support their IT processes. MSPs are often called upon as an alternative to adding additional in-house staff. In this e-guide, we will explain how a hybrid approach that utilizes managed services, the cloud, and internal IT support can truly be the best of all worlds. They simultaneously help businesses achieve a greater ROI from their IT costs while allowing existing in-house resources to be channeled into more important development roles.

"In the past...cost savings were seen as the primary benefit of MSPs. Now, cost benefits are considered table stakes and customers are looking for additional benefits like generating revenue and helping the company become more efficient." (CIO.com)

A happier, less overwhelmed in-house IT staff

Many of those never-ending tasks performed by in-house support on a daily basis can be automated and outsourced. While this might be interpreted as suggesting on-site staff is not necessary, that couldn't be further from the truth. Your current staff can benefit from MSP services such as:

- Proactive management
- Remote monitoring
- End user help desk
- 24/7 network operations center
- Disaster recovery/business continuity solutions
- Security audits/updates

These services free your in-house staff from many of the routine daily issues taking up most of their time. Instead, they can focus on meaningful jobs that create value for the entire company. MSPs can remove the burden of routine tasks from in-house support. With access to the MSP ticketing and monitoring system, and support from the 24/7 Network Operations Center, in-house IT have help identifying and addressing system issues before they become business-disrupting problems. Additionally, daily interruptions like constantly having to run to Jane's computer to see why her system is running slowly can instead be handled by the help desk.

Guided focus, direction, and prioritization

Working with a MSP gives existing in-house support much needed focus and direction. MSPs commonly offer a complimentary consultation and network assessment that evaluates the overall performance and health of your IT infrastructure. From there, the MSP will recommend products and services most beneficial to current IT needs. The evaluation helps internal IT determine what system oversight and future planning they should be doing. Any regular system maintenance tasks can be performed by the MSP while in-house IT can focus on processes that will drive down costs or increase revenue.

Fewer instances of failure and human error

A high percentage of costly security breaches are the result of human error. This is often because IT employees are stretched too thin and overlook vital security measures, such as applying tested security patches or updating anti-virus software programs. Working with a MSP will eliminate much of the work overload that often leads to system or security vulnerabilities. Systems can be backed up in the cloud for an immediate system restore if needed. Many of the issues that become costly business interruptions, such as downtime-inducing hardware, software, and application failures are completely preventable if they are detected early and addressed promptly.

Summary

"Before [managed IT service], we would try everything we could to fix a problem and everyone in the building would be frustrated. After switching, we just pick up our phones and press the Techvera button to speak with the help desk immediately. Or we can put in a service ticket from any workstation and include a screenshot of any error or virus message we may see. You being able to remote in and fix most problems within minutes is priceless to us. Managed services was attractive because I knew it would elevate our service."

Dr. Lori Hill, Dove Creek Animal Hospital

Many smaller firms have incredibly gifted and skilled IT employees that are burdened with way too many responsibilities, most of which are mundane and routine.

These employees should be used to help determine how IT can be used to innovate and drive business revenues.

IT can be a catalyst in the firm's entire business strategy, but not if the staff is burdened with updates, troubleshooting, and putting out daily fires.

MANAGED IT SERVICE CAN:

- > Free up your current talent for value-generating projects instead of repetitive, routine tasks.
- > Give your IT and management teams direction and guidance.
- > Ensure critical maintenance and security needs are being handled to keep your business protected and up-to-date.

Would you like a free managed services consultation at your business?
